1

Introduction

1.1. Assignment BEM **BERNAT**

Blabla

1.2. Single polar innacuracies **BERNAT**

Chowchow

2

Blade Element Momentum theory

2.1. Main assumptions of the BEM theory **NIKLAS**

Perujo

2.2. Code flow chart **CARLOS**

CS7. Carlos Simao 7, ô magnifico

3

Results

Describe the initial conditions, table, cool

3.1. BEM alligned rotor **BERNAT**

3.1.1. Main outputs **BERNAT**

Angle of attack and inflow angle **BERNAT**
Axial and azimuthal inductions **BERNAT**
Thrust and azimuthal loading **BERNAT**
Total thrust and torque **BERNAT**

3.2. BEM yawed rotor **NIKLAS**

3.2.1. Main outputs **NIKLAS**

Angle of attack and inflow angle **NIKLAS**
Axial and azimuthal inductions **NIKLAS**
Thrust and azimuthal loading **NIKLAS**
Total thrust and torque **NIKLAS**

3.2.2. Influence of tip correction **CARLOS**

3.2.3. Influence of numerical discretization **BERNAT**

3.2.4. Evaluation of stagnation enthalpy **CARLOS**

3.2.5. System circulation and vorticity **CARLOS**

3.2.6. Operational point **NIKLAS**

3.2.7. Brief comparison yaw vs. alligned rotor **NIKLAS**

Optional

**4.1. Explanation of the design approach used for maximizing the
Cp or efficiency**

Blabla

4.2. Plots with explanation of the new designs

Rick Sanchez

5

Conclusions NIKLAS

SHORT discussion/conclusion, including the similarities and differences between the two rotor configurations, flow field and operation

Bibliography
